Website Project Planning Document

I planned to use this class to get a basic understanding of how to develop a website and run it across its lifecycle. A professional page website is something that allows me to do this while creating a practical tool that I will improve on over time and be able to share with potential employers and the like. This website will be a summary of my professional and academic accomplishments and a way to contact me across platforms if needed.

I've identified a basic template that I can use for the home page and will work within their css style choices and use that to create the other two pages from scratch. This will allow me to practice working with html and ccs myself. The source I'm using can be found here ([link](#)) and has been linked in the head of each .html page. Additionally, I plan on using images of my fathers photography, all sourced from his website ([link](#)).

Structure and intent:

Page 1 – Photo and summary
Page 2 – My professional and academic experience
Page 3 – contact page with hyperlinks
